FeaturesApperable racksAll KitchenAid dishwashers have adjustable racks, but some are more versatile than others. Some models with racks that move up and down to accommodate larger items, while others have teeth that can be customized to change the rack layout. Some KitchenAid dishwashers even have a third top stand for better organization. However, the additional stand affects the size of the elements that can be placed in the second rack. ProScrubSome KitchenAid dishwashers are equipped with different washing zones, which are special areas for particularly dirty items that require special washing. These cycles don't work all the time that you're washing the load, but a few minutes that target heavily soiled dishes usually does the right deal. Washing zones can be especially helpful for pots and pans that have cooked food that needs to be scrubbed. CyclesRinse/Hold Cycle: While all KitchenAid dishwashers offer multiple washing cycles, only some models have a rinse or hold cycle. If you are not ready to run a full load of dishes, it allows you to rinse dirty items to prevent food from sticking to them while waiting for the dishwasher to fill. By holding the dishwasher until the full load, you will save water and electricity to keep the cost of the media on the downside. Washing cycles: KitchenAid dishwashers are equipped with a number of special washing cycles that can help with more efficient dish cleaning, but they vary depending on the model. All models have basic cycles such as light, normal and heavy, but you can find some of the express wash cycle that can clear the load, which is not very dirty in just 20 minutes. You can also find some KitchenAid dishwashers with cycles to china or crystal, soaking, scrubbing pots, steam cleaning and sanitizing. Heat drying cycle: Most KitchenAid dishwashers offer a heated drying cycle that significantly reduces drying time. It uses heated water and a fan to circulate warm air throughout the dishwasher, so the dishes don't take hours to fully dry after the end of the washing cycle, and you're able to unload the dishwasher that much earlier. If you do not intend to leave the dishes in the dishwasher to wait for the full load, it is not necessary to pre-use the items before loading them or using the rinse-only cycle. If you know that the dishes will sit all day, though, rinsing helps you later clean easier and keeps odors at bay. Do not place items in the dishwasher. Water will not hit all objects if they sit on each other and are not fully clean. Correctly place the dishes in the dishwasher. Place the bowls and plates on the bottom in a dishwasher with a dirty surface facing the bath floor. Glasses and cups should go upside down in the upper stand. Do not overfill the dishwasher. If you place too many items inside, not all items will be properly cleaned. Try vinegar for better rinsing. If you live in an area with hard water, it's a good idea to add a bowl of vinegar to the top shelf of the dishwasher to serve as a rinsing aid. This will help to remove any stains that arise from hard water. First, unload the bottom stand. After unloading the dishwasher, start with the lower stand. This prevents water from dripping from the top shelf items into the dry objects below. KitchenAid offers plenty of excellent dishwashers, and we couldn't include all of them on our shortlist.
